

Add & View health records on your iPhone or iPod touch

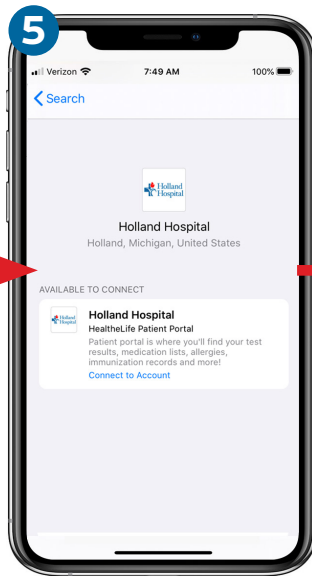

With the Apple Health app, you can see multiple health records – such as medications, immunizations, lab results, and more – in one place.

Add your health records

- 1 Open the Apple Health app  and tap the Summary tab.
- 2 Tap your profile picture  in the upper-right corner.
- 3 Under Accounts, tap Health Records, then tap Get Started. To add another provider, scroll down to Accounts, then tap Add Account.

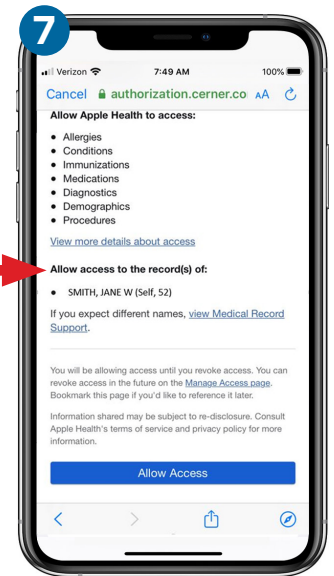

Search for Holland Hospital, then tap it.

Tap Holland Hospital
Choose to Connect.

Sign in to the Holland Hospital Patient Portal website or app (Healthlife). You might be asked to save your password.

It might take a minute for your records & information to update & appear. When prompted, click allow access.

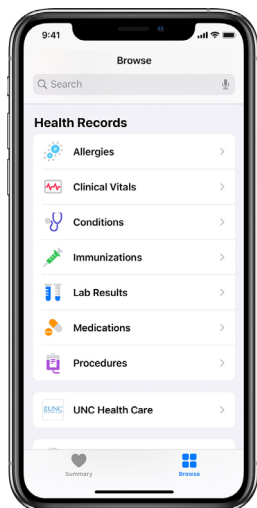

View your health records

After you have allowed access and you click on Browse, you can see at the bottom of the screen Holland Hospital is now connected to Apple Health.

You can view results from multiple health records in one spot (View only).

After you add an institution, the Health app automatically updates your health records periodically.

If there's an issue with your health records, contact your provider.

Remove a health record

1. Open the Apple Health app  and tap the Summary tab.
2. Tap your profile picture  in the upper-right corner.
3. Under Accounts, tap Health Records.
4. Tap the provider (Holland Hospital) you want to remove.
5. Tap Remove Account.
6. To confirm, tap Remove Account & Delete Data.

This also deletes the account and data from other devices where you're signed in to iCloud with the same Apple ID.

Please visit the [Apple website](#) for updated information.
